# Tasks

01

## Project & Tools

Install the tool and get the starter project

02

## Inspect the app

Use the proxy to show all the api calls

03

## Debugging

Debug and find out how you can fix the issue

04

## Advance Usage

Get to know how to use proxies in advance level

# 1- Project and Tools

01

## Download

Open Discord and download the sample project

02

## Proxy Tool

Setup a proxy tool to inspect APIs

03

## Certificate

Trust a certificate to be able to see the secure connections

04

## Finalizing

Make sure Proxy and starter project works as expected

# 2- Inspect the app

## Run the app

Make sure you are able to run the app on simulator or device

## Use Proxy

Make sure the proxy App shows the actual data by enabling the SSL Proxying

## Proxy effect

See all the APIs on the proxy app

31

# 3- Debugging

- Find out what's wrong
- Check the app with initial Json Contract
  - Using Mapping Tool
- Figure out where's the bug
- Fix the bug on the app

# 2,592,000s

Network Debugging tools will save so much **time**

# 4- Advance Usage

- **Stack Trace**  
Use instruments to see where the api is called in the code
- **Mirroring funcs**  
Using Mirror you can save a response to disk
- **Breakpoints vs Mapping**  
In Charles you can manipulate data as you wish

# Where to Go From Here?

Preventing Man-in-the-Middle Attacks  
with SSL Pinning

iOS / Android

# Thanks!
